Australian Permanent Resident | Relocating to Melbourne, Victoria

CAREER SUMMARY

ICT Program Officer at the Department of Health, Tasmanian Government (TAS Health). Designed and delivered the staged statewide rollout of REGIS (the Research Ethics and Governance Information System) across all TAS Health sites and departments (146+ departments), and designed and ran the migration of 150+ projects into it. TAS Health's primary technical liaison with NSW Health and the platform vendor, and its representative on the national Technical Advisory Group (TechAG) for the National One Stop Shop (NOSS) Program. Works between stakeholders and technical teams: gathers requirements, trains and supports users, designs Power BI reports and dashboards hands-on, and directs AI-assisted builds of data and automation tools (R, SQL, VBA, Power Automate, Power Apps, JavaScript).

CORE COMPETENCIES

Project Coordination & Delivery: Staged system implementation • Project planning • Migration planning • Risk identification & escalation • Progress reporting • Vendor liaison • Change management & business readiness

Business Analysis: Requirements gathering • Process analysis & mapping (Mermaid) • Use-case modelling • Stakeholder mapping & engagement • Process improvement • Gathering user feedback

Data, Reporting & Automation: Power BI report & dashboard design • Data analysis & reporting • AI-assisted development (R, SQL, JavaScript) • VBA / Power Automate / Power Apps workflows • Macro-enabled tracking workbooks

User Enablement & IT Support: Training design & delivery • Documentation & user guides • On-site & remote technical support • IT asset register & software licence management • Onboarding & offboarding (devices, accounts, access) • ICT service desk liaison • Platform configuration

PROFESSIONAL EXPERIENCE

ICT Program Officer **Nov 2022 – Present**
Department of Health, Tasmanian Government

Rollout and migration

- Designed and delivered a staged statewide rollout of both the Research Governance and Research Ethics modules across all Department of Health sites and departments (146+ departments) in the South, North, North West and Statewide Services regions, piloting first with the largest departments in the South and North to test the platform and validate user acceptance before full rollout.
- REGIS is now the sole system for research ethics and governance submissions across TAS Health, replacing the prior paper-based process entirely.
- Designed and delivered the migration process that took paper-based projects from 2 pilot studies to 150+ and counting, writing the published migration guides and giving direct, one-on-one support to researchers and departments throughout.
- Identified a risk in the original migration process: access defaulted to whichever individual first registered a project, who for multi-site or national studies could sit in NSW Health, ACT Health or another jurisdiction and could leave or become unreachable. Negotiated a fix with NSW Health so access now defaults to research coordinators.
- Piloted new REGIS features including Teletrial functionality, testing hands-on, gathering user feedback, and refining how it worked before wider rollout.

Vendor liaison and platform support

- TAS Health's primary technical liaison with NSW Health and the platform vendor since 2022: reproduce reported issues in the REGIS sandpit (test) environment, write up what needs to change, give users a solution or workaround in the meantime, and follow each issue through until resolved.
- Designed the milestone-based workaround researchers and Health Research Officers rely on for TAS annual and progress reports, since REGIS can only route these to the Human Research Ethics Committee (HREC), including a decision tree and cheat sheets used statewide.
- Represent TAS Health on the national Technical Advisory Group (TechAG) for the National One Stop Shop (NOSS) Program, supporting its transition to the NOSS platform.
- Manage the Health Research Office team's IT asset register and software licences, set up devices, accounts and access for new starters and remove them when people leave, and act as the team's first point of contact for IT issues, troubleshooting directly and logging and following up jobs with the department's ICT service desk through to resolution.

Reporting and automation

- Design Power BI dashboards hands-on for senior medical leadership, including an internal executive report and a public dashboard on the Department of Health website; recently also picked up data analysis and reporting duties for the wider team.
- Directed the AI-assisted build of R-based analysis and VBA, Power Automate, Power Apps and JavaScript workflows.

- Built a Power Automate flow reconciling application-tracking spreadsheets into a single, always-current SharePoint list, alongside a Power Apps tool for logging and surfacing email communications against each application (since retired).

Training, documentation and communication

- Run ongoing training sessions and one-on-one consultations for every REGIS stakeholder: Site and Coordinating Principal Investigators, researchers, Heads of Department, Chief Executives, ethics reviewers and committee members, and health research officers, across TAS Health's internal departments and external research institutions, including the University of Tasmania.
- Wrote REGIS's TAS-specific resource library from scratch, all in current use: internal staff guidance and decision tools, and published resources including the FAQs, training resources, migration guide and annual report instructions.
- Design and maintain the Health Research Office's intranet and public pages, updating both regularly as stakeholder needs change, with editor and publisher access on the intranet.
- Champion for the department's shift to Microsoft Teams channels for internal communication; wrote the adoption instruction guide.

Telehealth Coordinator **Dec 2021 – Nov 2022**
Department of Health, Tasmanian Government

- Managed Telstra's MyCare Manager platform for remote patient and clinician support statewide, and worked with ICT teams to enhance it, including integrating patient reports into the department's clinical patient portal.
- Supported statewide delivery of the COVID@HomePlus (now Care@Home) remote monitoring program, providing day-to-day technical support and troubleshooting for clinicians, patients and admin staff.
- Developed Standard Operating Procedures (SOPs) and delivered staff training on remote patient monitoring, letting the service scale fast without losing safety or consistency.
- Improved the service through process mapping, data validation and end-user feedback analysis.
- Handled sustained, high-volume technical support during peak pandemic periods, across a statewide platform.

Website Designer & Virtual Tour Creator **Aug 2020 – Mar 2021**
National Trust of Tasmania

- Designed the website and produced 360° VR tours for the "This Place Matters" campaign using Matterport, including an immersive tour of the historic Runnymede site.
- Wrote the narrative and interpretive storytelling presented across each heritage site, not just the technical build.
- Led performance optimisation and cross-device testing for a smooth public-facing experience.

Director **Aug 2020 – Mar 2021**
123D Studio Pty Ltd

- Co-founding director alongside two other directors; worked as a website designer using WordPress and Squarespace.

Customer Service Representative **Apr 2017 – Nov 2019**
BP Box Hill South, Victoria

- Managed POS systems and daily site operations.
- Resolved technical and service issues on the spot while maintaining high customer satisfaction.

EDUCATION & CERTIFICATION

Master of Information Technology — Charles Sturt University, 2019
Bachelor of Computer Science Engineering — Osmania University, 2016
Certified Project Officer (CPO) — Centre for Project Innovation
Project Management Short Course — University of Tasmania, 2024
Advanced Diploma in Leadership & Management — Clinton Institute, 2020
ITIL 4 Foundation Certificate in IT Service Management
ACS Professional Year (IT) — Indus Institute, 2020

TECHNICAL SKILLS

Microsoft 365: Teams, SharePoint, Outlook, Word, Excel, PowerPoint
Platform Management: REGIS, REDCap, SiteDocs Portal, Vision6, MyCare Manager, Adobe Acrobat Pro (enterprise admin console)
Automation & Development: Power Automate, Power Apps; R, SQL, VBA and JavaScript (AI-assisted)
Data, Reporting & Process Mapping: Power BI, Mermaid
AI & Development Tools: Claude Code, ChatGPT, Cursor
Other: MySQL, WordPress, Squarespace, Matterport
